Air Cooled Modular Chiller

mbt.midea.com

MIDEA BUILDING TECHNOLOGIES **2023**

Midea MBT

Midea MBT (Midea Building Technologies) is a key division of the Midea Group, a leading provider of comprehensive solutions of intelligent building, involving energy sources, elevators, control systems, and heating, ventilation & air conditioning. Midea MBT has continued with the tradition of innovation upon which it was founded and emerged as a global leader in the HVAC and building management industry. A strong drive for advancement has resulted in an extensive R&D department that has placed Midea MBT at the forefront of a competitive edge. Through these independent projects and joint-cooperation with other global enterprises, Midea has supplied thousands of innovative solutions to customers worldwide.

3 businesses constitute the significant components of Midea intelligent building solutions

4 production bases can achieve fast delivery

Over **100** testing labs cover all different real application sceneries

All products can be visualized and digitalized throughout entire process

Midea Air-cooled Modular Chiller History

Midea Global Spare Parts Center

The global spare parts center provides high quality and fast spare parts supply. Midea online system (<https://tsp.midea.com>) can query and purchase spare parts with one click, further shortening the supply time of spare parts.

The “ **2** (HQ Spare parts center) + **10** (Regional Spare parts center) + **N** (Country Spare parts inventory)” Spare Parts Layout can ensure the timely supply of global after-sales spare parts.

Technical Support Platform (TSP)

TSP is a platform for customers to provide professional technical support. Through TSP, you can inquire product information, documentation, spare parts and trouble-shooting, initiate technical questions and quality complaint process, and also support self-service spare parts order.

Website address: <https://tsp.midea.com/>

My order

Inquire spare parts from exploded view and place spare parts order directly in TSP.

Document inquiry and download

View or download product technical documentation online, such as catalogs, images, training PPTs, etc.

Technical inquiry & FAQ

Initiate technical questions online, and our technicians answer them online in time. Find a quick solution in the FAQ.

Troubleshooting

Query the error code and solution by SN, model name, error code or product type.

Complain

Initiate the product quality complaint process online, and our after-sales engineers handle related complaints in time.

Mobile Intelligence Service App (MISA)

MISA is the mobile terminal of TSP, with the same functions as TSP. The mobile service makes technical support more timely and convenient.

Scan above to download the mobile app

Thank you very much for your attention and advice

MBT Learning Academy

Objective

MBT Learning Academy aims to provide training to the sales personnel as well as technical personnel in order to increase the utilization for your MBT equipment. Once you have purchased equipment from MBT, taking care of the equipment is topmost priority. MBT Learning Academy offers training courses to learn firsthand from the manufacturer what it takes to get the best out of your MBT product. The goal of MBT Learning Academy is to provide product specific training, safe work procedures and expertise in carrying out the installation and maintenance of MBT products as well as teaching the main selling points in order to help the sales people sell the MBT products with ease.

Training Centers

Our world class training centers provide knowledge and skills necessary to efficiently deploy MBT technologies. The training centers include dedicated laboratories to provide hands-on experiences with various systems, components and controls to refresh and enhance the skills of your sales, design and installation and service teams. Right now we operate our trainings from the below two locations:

1. MBT Training Center

Address: MBT Training Center, 2nd Floor, Building 6, Midea Global Innovation Center, Beijiao , Shunde, Foshan, China Pin- 528311

The Midea MBT Training Center is situated 70 kilometers from Baiyun Guangzhou International Airport.

Products: VRF, M thermal

2. Chongqing Midea Training Center

Address: No. 15, Qiangwei Road, Nan'an District, Chongqing, China

Chongqing Midea Training Center is 35 kilometers from Chongqing International Airport.

Products: Centrifugal Chiller, Screw/Scroll Chiller and Terminals

VRF training

M thermal training

Chiller training

Global Technical Trainings

The training courses by MBT Learning Academy are divided into the following two categories with different targeted audiences for each.

Design and Application Trainings: The design and application trainings for various products are basically for the sales personnel selling MBT products in order to give them basic understanding about the main features. The trainings are conducted on a global level inviting sales engineers, technical engineers, consultants and project designers from different parts of the world.

After Sales- Service Trainings: These trainings are dedicated for the After Sales/ Service personnel in order for them to better carry out the installation, commissioning and maintenance of MBT products. Technical person and engineers from different parts of the world are invited to take part in these trainings.

Online Trainings: The trainings to the Global customers can also be done online with the help of Team and Midea Meeting software. This way, the customers do not need to be physically present for the training. Amid the COVID-19 pandemic, MBT Learning Academy has conducted a lot of online trainings. The training videos are available on the TSP system and can be downloaded by using QR codes.

Products: VRF, M thermal, Chillers and Terminals

Highly Skilled Trainers: The trainers for various courses by MBT Learning Academy are expert people with vast experiences in their field. Most of them have a deep insight about the global HVAC market and help the attendees to better understand the MBT products.

Training Certificates:

The attendees for Global trainings are provided a training certificate highlighting the courses discussed in the training, signed by Mr. Henry Cheng, General Manager of MBT Overseas Sales Company.

Registration:

You can contact your respective Midea contact point to provide you with the complete schedule about the global technical trainings as well as how to register for these trainings.

For further enquiries about the Global Trainings conducted by MBT Learning Academy, please send email at the following email address:

Office building

FINNING CAT Office Building

- Country: Chile
- City: Santiago
- Outdoor Units: Air-cooled scroll chiller
- Indoor Units: FCU
- Total Capacity: 740 HP

Vimpelcom Office Building

- Country: Russia
- City: Yaroslavl
- Outdoor Units: Air-cooled scroll chiller
- Indoor Units: FCU
- Total Capacity: 186 HP

Transportation

Sulaymaniyah Airport

- Country: Iraq
- City: Sulaymaniyah
- Outdoor Units: Tropical air-cooled scroll chiller
- Indoor Units: FCU
- Completion Year: 2017

Hotels & Resorts

Great Wall Plaza

- Country: Vietnam
- City: Hai Duong
- Outdoor Units: Air-cooled modular chiller & ATW Heat Pump
- Indoor Units: FCU
- Total Capacity: 700HP

Complex

Grand Comfort is the largest material market in middle Asia, the total area is 55,000 square meters. Midea CAC provided 21 air-cooled power and super modular chillers for the project. The total capacity is up to 5,780kW.

Grand Comfort Material Market

- Country: Kyrgyzstan
- Outdoor Units: Air-cooled modular chiller
- Indoor Units: FCU & AHU
- Total Capacity: 5,780kW
- Completion Year: 2015

Industry

KUKA Robotics in Hungary

- Country: Hungary
- City: Füzesgyarmat
- Outdoor Units: Air-cooled scroll chiller
- Indoor Units: FCU & AHU
- Total Capacity: 715kW

Zetes Power Station

- Country: Turkey
- City: Zonguldak
- Outdoor Units: Precision A/C, VRF, Air-cooled modular chiller
- Indoor Units: Duct & Cassette, AHU
- Total Capacity: 500HP

City Mall

- Country: Tanzania
- City: Dar es Salaam
- Outdoor Units: Air-cooled modular chiller
- Indoor Units: FCU & AHU
- Total Capacity: 1,560kW

Hospitals & Healthcare

Komar University

- Country: Iraq
- City: Sulaymaniyah
- Outdoor Units: Air-cooled screw & scroll chiller
- Indoor Units: FCU & AHU
- Total Capacity: 2,350kW

R410A Aqua Tempo Super II Series

Product lineup

Capacity(kW)	30	60	90
Appearance			
380-415V/3Ph/50Hz			

Overview

R410A refrigerant zero impact on the ozone layer;
DC Inverter technology allows precise consumption on real load;
Minimum water temperature down to 0 °C (Anti-freeze liquid needed);
Minimum operation ambient temperature down to -10 °C for cooling mode;
High energy efficiency level A++ for energy saving (Water outlet temperature at 35°C);
Maximum 16 units combination and controlled by one controller;
Maximum 1440kW combination capacity;
Maximum 256 units controlled through Modbus;
Hydraulic model for customization.

Ambient temperature*

Stable operation even under extreme conditions: -20°C to 43°C.

* It indicates the product lineup can cover the operation range. For specific operation range of different models, please refer to the specifications.

Outlet water temperature

Note: For cooling mode, if outlet water temperature is less than 5°C, anti-freeze liquid is needed. 0°C water temperature can be reached by changing DIP switch setting.

High quality components

DC Inverter compressor

At the heart of the chiller lies a world-leading DC inverter compressor. The compressor’s innovative design and numerous high performance features reduce power consumption by 25%.

Compressor for 30/60kW models

EVI Compressor for 90kW model

High efficiency plate heat exchanger

Plate heat exchanger uses metal plates to transfer heat between refrigerant and water. The fluids are exposed to a much larger surface area because the fluids spread out over the plates, so both heat transfer efficiency and heat exchanger speed are greatly improved. Multi protections including voltage protection, current protection, anti-freezing protection and water flow protection ensure system safety running.

DC fan motor

Fan speed is controlled according to the system pressure and system load, reducing power consumption by 30%. There are 12-step vector control.

High performance heat exchanger

Enlarge heat-exchanging area

Fin

Enhance heat transfer

Inner-threaded pipe

High efficiency

Fin + inner-threaded pipes

Chillers use new structure design "I shape" condenser. The manufacturing process of "I shape" heat exchanger is simple, which increases production efficiency and product reliability. Hydrophilic film fins and inner-threaded copper pipes optimize heat exchange efficiency. The specially coated blue fins enhance durability and protect against corrosion from air, water and other corrosive agents, assures a longer coil service life.

Heat exchanger aluminum foil

> Standard products:
200h of neutral salt mist

> Heavy anti-corrosion products:
1000h of neutral salt mist
140h of acid salt mis

Heat exchanger copper pipe

> Standard products:
24h of neutral salt mist

> Heavy anti-corrosion products:
150h of neutral salt mist

Precise flow control

Patented liquid distribution components maximize performance and minimize impact of defrosting operation. 500-step EXV with capillary tube allows stable and accurate gas flow control. Fast response results in higher efficiency and improved reliability.

Advanced technology

Enhanced Vapor Injection (EVI) Compressor

Thanks to the vapor injection DC inverter compressor, the 90kW model can run heating mode stably down to -20°C , and the heating capacity can be improved greatly.

EVI compressor

Plate Heat Exchanger Subcooling

For 90kW model, plate heat exchanger as a secondary intercooler boosts up refrigerant subcooling and improves 10% energy efficiency.

Precise Oil Control Technology

Four stages of oil control technology ensure all outdoor compressor oil is always kept at a safe level, eliminating any compressor oil shortage problems.

- Compressor internal oil separation.
- High-efficiency centrifugal oil separator (with separation efficiency of up to 99%) ensures that oil is separated from the discharge gas and returned to the compressors in a timely fashion.
- Oil balance pipe ensures oil distribution to keep compressor running normally.
- Auto oil return program monitors the running time and system status to ensure reliable oil return.

Refrigerant Cooling PCB

The 90kW model uses refrigerant cooling technology to cool the electric control box. Refrigerant cooling PCB technology reduces electric control heating under harsh working conditions, effectively reduce the temperature of electronic control components, ensure the stable and safe operation of the unit control system.

Intelligent defrosting technology

The intelligent defrosting program calculates the time required for defrosting according to the actual system status, eliminating heat losses from unnecessary defrosting. A specialized defrosting valve reduces time required for defrosting to as little as four minutes.

Rapid cooling or heating

The DC inverter compressor reaches full capacity rapidly, providing quicker cooling or heating with lower levels of temperature fluctuation during the cooling/heating operation.

Flexibility

Modular design

Modularity is perfect when an extension of capacity becomes required as the building load range from 30kW to 1440kW.

Alternative cycle duty operation

In one combination system, all units operate as alternative in cycle duty to keep equal running time, realize higher stability, better reliability and longer lifespan.

Alternate defrost operation

By detecting the water temperature, the proportion of defrosting unit can be determined intelligently so as to realize small water temperature fluctuation during the alternate defrosting period.

Back-up function

In a combination system, if one unit fails, other units can be used as backup and continue the operation.

Multiple function

Multiple silent modes

Different silent modes enable noise reduction to suit time of day and ambient noise levels.

Weather temperature curve

With the help of weather temperature curve function, water temperature will automatically change as outside air temperature changes. When outdoor air temperature increases/decreases, the heating load will decrease/increase and water temperature will decrease/increase automatically. When outdoor air temperature decreases/increases, the cooling load will decrease/increase and water temperature will increase/decrease automatically.

Remote alarm, on/off control, cooling/heating control.

One-touch water temperature switch

For cooling and heating mode

Switched just by one-touch.

Anti-corrosion Protection

Outdoor units are given anti-corrosion treatment for non-extreme conditions as standard and can also be customized with heavy anti-corrosion treatment on main components for surface protection against corrosive air, acid rain and saline air (for installations in coastal regions) to extend overall machine life span. The integrity of the anti-corrosion treatment is ensured by subjecting major components and parts to salt mist testing, moisture and heating testing and light aging testing.

Fan motor

Standard products:
72h of neutral salt mist

Heavy anti-corrosion products:
240h of neutral salt mist

Painted sheet metal(portion)

Standard products:
500h of neutral salt mist
1000h of moisture and heating test
500h of light aging test

Heavy anti-corrosion products:
1000h of neutral salt mist
2000h of moisture and heating test
720h of light aging test

Screws / bolts / gaskets

Standard products:
300h of neutral salt mist

Heavy anti-corrosion products:
720h of neutral salt mist

Heat exchanger aluminum foil

Standard products:
200h of neutral salt mist

Heavy anti-corrosion products:
1000h of neutral salt mist
140h of acid salt mist

Heat exchanger copper pipe

Standard products:
24h of neutral salt mist

Heavy anti-corrosion products:
150h of neutral salt mist

Electric control box case

Standard products:
96h of neutral salt mist

Heavy anti-corrosion products:
240h of neutral salt mist

Convenient control

- Touch key wired controller as standard accessory to control the chillers.

Model	KJRM-120H/BMWKO3-E
Appearance	
Main Functions	Touch key operation Parameter setting an LCD display Real-time clock function Multiple timer Power-off memory function Modbus Address setting Parallel function Buzzer prompt tone and alarm functions Weekly schedule Double set point function
Max. connection PCBs	16

Three user levels

Three different user levels ensure users can easily access control functions and allow engineers convenient access to operating parameters.

Group control for up to maximum 16 units with one wired controller
For master unit, one controller is used for setting whilst another controller can be connected and used for monitoring. For slave units, controllers are only used for monitoring.

Multilingual wired controller using Modbus communication protocol

Easy installation

Built-in components

hydraulic module
(customization option)

water flow switch

wired controller

Air purge valve

Pressure relief valve

Water pipe connection

Only water piping installation is needed, no need to install refrigerant piping.
30kW model use screwed connection. 60/90kW models use hoop connection. Both of them can be changed to flange connection by using Midea accessory in orther to suit more application.

Rotatable electric control box

The bottom layer can be easily achieved through the rotatable upper PCB, making the maintenance easier.

Appearance				
380-415V/3Ph/50Hz				

Overview

Refrigerant R32 75% less impact on global warming;
DC Inverter technology allows precise consumption on real load;
One-stop solution for heating, cooling and domestic hot water(Customization);
Maximum water temperature up to 60°C for DHW mode(Customization);
Minimum operation ambient temperature down to -10 C for cooling mode;
High energy efficiency level A++ for energy saving (Water outlet temperature at 35°C);
Space saving;
Maximum 2240kW combination capacity;
Maximum 256 units controlled through Modbus;
Hydraulic model for customization;

Ambient temperature

Outlet water temperature

Note: For cooling mode, if outlet water temperature is less than 5°C, anti-freeze liquid is needed. 0°C water temperature can be reached by changing DIP switch setting.

High quality components

DC Inverter compressor

High efficiency plate heat exchanger

Plate heat exchanger uses metal plates to transfer heat between refrigerant and water. The fluids are exposed to a much larger surface area because the fluids spread out over the plates, so both heat transfer efficiency and heat exchanger speed are greatly improved. Multi protections including voltage protection, current protection, anti-freezing protection and water flow protection ensure system safety running.

DC fan motors

Fan speed is controlled according to the system pressure and system load, reducing power consumption by 30%. There are 32-step vector control.

High performance heat exchanger

Enlarge heat-exchanging area

Enhance heat transfer

High efficiency

Fin

Inner-threaded pipe

Fin + inner-threaded pipes

Hydrophilic film fins and inner-threaded copper pipes optimize heat exchange efficiency. The specially coated blue fins enhance durability and protect against corrosion from air, water and other corrosive agents, assures a longer coil service life.

Heat exchanger aluminum foil

- > Standard products:
200h of neutral salt mist

- > Heavy anti-corrosion products:
1000h of neutral salt mist
140h of acid salt mis

Heat exchanger copper pipe

- > Standard products:
24h of neutral salt mist

- > Heavy anti-corrosion products:
150h of neutral salt mist

Precise flow control

Patented liquid distribution components maximize performance and minimize impact of defrosting operation. 500-step EXV with capillary tube allows stable and accurate gas flow control. Fast response results in higher efficiency and improved reliability.

Advanced technology

Enhanced Vapor Injection (EVI) Compressor

Thanks to the vapor injection DC inverter compressor, unit can run heating mode stably down to -20 °C , and the heating capacity can be improved greatly.

EVI compressor

Plate Heat Exchanger Subcooling

Plate Heat Exchanger as a secondary intercooler boosts up refrigerant subcooling and improves 10% energy efficiency.

Precise Oil Control Technology

Four stages of oil control technology ensure all outdoor compressor oil is always kept at a safe level, eliminating any compressor oil shortage problems.

- Compressor internal oil separation.
- High-efficiency centrifugal oil separator (with separation efficiency of up to 99%) ensures that oil is separated from the discharge gas and returned to the compressors in a timely fashion.
- Oil balance pipe ensures oil distribution to keep compressor running normally.
- Auto oil return program monitors the running time and system status to ensure reliable oil return.

Refrigerant Cooling PCB

Refrigerant cooling PCB technology reduces electric control heating under harsh working conditions, effectively reduce the temperature of electronic control components, ensure the stable and safe operation of the unit control system.

Intelligent defrosting technology

The intelligent defrosting program calculates the time required for defrosting according to the actual system status, eliminating heat losses from unnecessary defrosting. A specialized defrosting valve reduces time required for defrosting to as little as four minutes.

Rapid cooling or heating

The DC inverter compressor reaches full capacity rapidly, providing quicker cooling or heating with lower levels of temperature fluctuation during the cooling/heating operation.

Flexibility

Modular design

Modularity is perfect when an extension of capacity becomes required as the building load range from 75kW to 2240kW.

Space saving and simplified installation

Single unit covers an area of only 1.92m², which greatly saves lots of space for group control. The hydraulic models (customized) has the water pump components inside the unit, which can save the installation cost and time and make installation easier.

High reliability

Alternative cycle duty operation

In one combination system, all units operate as alternative in cycle duty to keep equal running time, realize higher stability, better reliability and longer lifespan.

Alternate defrost operation

By detecting the water temperature, the proportion of defrosting unit can be determined intelligently so as to realize small water temperature fluctuation during the alternate defrosting period.

Back-up function

In a combination system, if one unit failed, other units can be back-up instead of the failed one for continuing operation.

Multiple function

Multiple silent modes

Different silent modes enable noise reduction to suit time of day and ambient noise levels.

Multiple optimization design makes noise reduction

Optimized fan blade edge by CFD programs with analyzing air pressure distribution
Realize higher air volume, lower noise level.

USB function

Convenient program upgrade

No need to carry any other heavy equipments but only USB can realize program upgrade of indoor unit and outdoor unit.

7 Levels of energy saving

For projects with temporary electricity supply restrictions, the outdoor unit supports 7 levels of energy management which can be set to output 40-100% capacity. It prevents tripping during electricity supply restriction conditions and remains system continue to operate.

Weather temperature curve

With the help of Weather temperature curve function, water temperature will automatically change as outside air temperature changes. When outdoor air temperature increases/decreases, the heating load will decrease/increase and water temperature will decrease/increase automatically. When outdoor air temperature decreases/increases, the cooling load will decrease/increase and water temperature will increase/decrease automatically.

Remote alarm, on/off control, cooling/heating control.

One-touch water temperature switching

For cooling and heating mode, different water temperatures can be switched just by one-touch.

Anti-corrosion Protection

Outdoor units are given anti-corrosion treatment for non-extreme conditions as standard and can also be customized with heavy anti-corrosion treatment on main components for surface protection against corrosive air, acid rain and saline air (for installations in coastal regions) to extend machine life span. The integrity of the anti-corrosion treatment is ensured by subjecting major components and parts to salt mist testing, moisture and heating testing and light aging testing.

Aqua Tempo Super Series

Capacity (kW)	35	65	80	130
Appearance				
Series				
SS-LA				

SS-LA: Super series with low ambient temperature cooling function

Features

Wide application range

- Aqua Tempo Super chillers with cooling capacity ranging from 35kW to 130kW, combination capacity can be up to 2080kW.

- Freely combine with fan coil units and air handling units. Home owners may choose the best types according to their functional needs.

- Wide ambient temperature and water outlet temperature operation ranges

*It is the maximum range that can be covered by the series. For specific models' range, please refer to the specifications.

High quality components

- H shape high performance heat exchanger

The chillers use new structure design, H shape condenser, 360°air intake, increase the heat exchanging area, efficiently enhance the heat exchange efficiency, and decrease the covering area.

H shape condenser uses inner grooved copper tube and hydrophilic aluminum foil, greatly improve the heat exchange efficiency.

● High performance heat exchanger

Enlarge heat-exchanging area

Fin

Enhance heat transfer

Inner-threaded pipe

High efficiency

Fin + inner-threaded pipes

Hydrophilic film fins and inner-threaded copper pipes optimize heat exchange efficiency. The specially coated blue fins enhance durability and protect against corrosion from air, water and other corrosive agents, assures a longer coil service life.

Heat exchanger aluminum foil

> Standard products:
200h of neutral salt mist

> Heavy anti-corrosion products:
1000h of neutral salt mist
140h of acid salt mis

Heat exchanger copper pipe

> Standard products:
24h of neutral salt mist

> Heavy anti-corrosion products:
150h of neutral salt mist

● EXV for more precise flow control

Patented liquid distribution components to maximize performance and minimize defrost impact.
500 steps EXV plus capillary for stable and accurate gas flow control.
Fast response resulting in higher efficiency and improved reliability.

● Tube-in-tube & shell-tube heat exchanger

Inner grooved copper pipe, increased area of heat exchange, improved efficiency.

Anti-corrosion shell increases the life span of heat exchanger.

For shell-tube heat exchanger, the module adopts the new helical baffle design to avoid the rectangular place of water dead zone, greatly improve the heat exchange efficiency.

High reliability

● Alternative cycle duty operation

In one combination module, all slave units operate as alternative in cycle duty to keep equal running time, realize higher stability, better reliability and longer lifespan.

For example, 16 modules combination, no.1 is master unit, others are slave units.

● Back-up functions

In a combination system, if one module fails, other modules can be used as backup and continue the operation.

● Reliable protections

Multiple protections are adopted to ensure system stable running.

High/low pressure protection of compressor

Power phases sequence protection

Evaporator low temperature protection in cooling

System anti-freezing protection in winter

Frequent compressor ON/OFF protection

Over-current protection of compressor

Discharge temperature protection of compressor

System high temperature protection

Water flow protection

Sensor malfunction protection

● Intelligent defrosting technology

Model alternative defrosting technology ensures little fluctuation on water temperature.
Manual defrosting program is available for service purpose.

Flexible installation

● Compact structure design

Super power chiller uses compact structure design, light weight, easy for transportation and installation.

1: Big air flow but low noise fan
Big torque high efficiency fan motor

2: Scroll compressor
High efficiency
Low noise

3: Control box
Easy to maintain

4: Multi folder frame
Low vibration.
Durable and stable

5: Helical baffle
Efficiency increase 10%

6: EXV
500 steps

7: Inner grooved copper tube
Capacity & efficiency increase

Compact design saves space and transportation cost.

Easy control

- Touch key wired controller as standard accessory to control the chillers.

Model	KJRM-120D/BMK-E(standard)	KJR-120A/MBTE(optional)
Appearance		
Main Functions	Touch key operation Parameter setting and LCD display Real time clock control. Multiple timer Power-off memory function Modbus(Customized) Address setting Parallel function	Mechanical buttoon Parameter setting and LCD display Real time clock control. Max. connection PCBs	16	16

● Modbus function

Modbus is an open protocol that is widely used, especially in BMS building control systems. Modbus function can be customized by adding X, Y, E ports on wired controller KJRM-120D/BMK-E. It can connect Max. 16 wired controllers and each controller can control Max. 16 units.

● Convenient operation

Remote on/off function, remote heating/cooling function and alarm function can be easily realized by connecting switches or light/sound devices with PCB.

Note: When use the remote control function, KJRM-120D/BMK-E should not be connected to the unit and water setting temperature is default. If water temperature setting is needed, KJR-120A/MBTE wired controller can be used to connect to the unit.

King Series

Midea King Series Air Cooled Heat Pump Modular Chiller

Eight core advantages:

Stylish appearance

Energy control technology

Flexible installation

Environment-friendly

Energy-efficient

Stable Performance

Module combination

Smart control

Exquisite process

Symmetrical appearance structure design, showing the beauty of manufacturing process

Innovative design

Elegant and exquisite design of hidden heat exchanger pipeline

Upgraded strength

Multi-folder column structure, greatly improving the structural strength of the unit

Quick panel disassembly, excellent pipeline protection

Easy maintenance

Thicker metal plate, sturdy and durable, shock-absorbing

Sturdy and durable

Lifting hole retained to make handling convenient

User-friendly design

Outline

The air cooled heat pump modular chiller is a central air conditioning unit that uses air as its cooling and heating source and water as the heat transfer medium. The unit can form a centralized air conditioning system together with FCU and AHU for cooling in summer and heating in winter. Midea King series air cooled heat pump units employ a modular design, and include 65 kW and 130 kW modules. Up to 16 modules can be connected in parallel to form a combination product from 65 kW to 2,080 kW.

This unit is widely used in newly built and rebuilt large and small industrial and civil construction projects, places with high requirements for operating noise and surrounding environment, and places with water shortage or inconvenient to install cooling towers. The unit is especially suitable for buildings like hotels, restaurants, supermarkets, shopping malls, office buildings, cinemas and theatres, and factories.

65 kW

130 kW

Nomenclature

Excellent design

Features

Environment-friendly

Eco-friendly refrigerant R410A is used, with a higher cooling efficiency. R410A does not contain chlorine that destroys the ozone layer, and its Ozone Depletion Potential (ODP) value is 0. R410A also effectively reduces CO₂ emission.

Energy-efficient

Midea King series modular chiller integrates an efficient compressor, a new-generation efficient heat exchange system, a high-precision electronic expansion valve, and other professional components. The COP of the full series units reaches the leading level in the industry.

◆ Hermetic scroll compressor technology, stronger in power

Note: The actual compressor prevails.

◆ Efficient heat exchanger, greatly improving heat exchange efficiency

• High-efficiency air-side heat exchanger

Based on the professional analog calculation of temperature field, heat exchangers are deployed in the upper part near the fan. With air inlet on all sides, the airflow is more uniform, and the utilization efficiency of heat exchangers is higher. Moreover, the bottom of the unit is not easy to frost in winter.

Heat exchangers are centralized in the upper part of the unit. Heat exchange is concentrated, and the air is evenly supplied on all sides to maximize the effective heat exchange area of the unit.

The utilization of heat exchangers at the bottom is low. The air inlet is uneven, causing waste. In addition, the bottom is easy to frost, affecting the heat exchange efficiency.

Features

• High performance heat exchanger

The newly designed window fins and extended heat exchange area save more power and enhance the heat exchange performance. Hydrophilic aluminum foil fins and inner grooved copper tube optimize heat exchange efficiency. The specially coated blue fins can improve durability and prevent corrosion by air, water and other corrosive agents, ensuring a longer service life of the coil.

• Efficient water-side heat exchanger

For a shell-and-tube heat exchanger, the module adopts the new type of spiral baffle plate design to avoid the dead water area from forming a rectangular space, which greatly improves the heat exchange efficiency.

◆ High-efficiency low-noise fan, working with energy-saving motor

With CFD optimized impeller, the air-side heat exchange effect is better. Together with the excellent working speed of the motor, the airflow noise is lower and the sound quality is softer.

The energy-saving motor undergoes the optimization design of motor coil to reduce the loss effectively, improve operation efficiency, and guarantee low heat release of the motor, low power consumption and long operation life.

◆ EXV, more precise flow control

Liquid-phase distributed components maximize the performance and minimize the effects of defrosting. Together with capillary tube, 500-stage EXV can stably and precisely control airflow, with fast response, higher efficiency, and better reliability.

◆ Intelligent defrosting technology

Alternate operation among units can ensure that the water temperature fluctuates little. The manual defrosting procedure can be used for service purposes.

Features

Stable and reliable

Hot gas bypass technology

The hot gas bypass technology can better improve the safety and stability of the unit in heating conditions, and expand the operating range of the heating conditions.

Alternate operation technology between modules

Based on the system load, the unit sets the module that is started preferably in turn and equally allocates the running time of each module, greatly enhancing the reliability of the unit and prolonging its service life.

Alternate technology between combined modules

Note: These figures take the combination of four modules as an example.

Module Standby Operation Technology

With the special standby operation technology and the single-module multi-system design, different modules in the same system are standby to each other, ensuring that the system can keep running in an emergency when one or more compressors or modular chillers fail.

Various protection functions, ensuring safe operation of the system

The system adopts modular structure, and the unit starts up in stages, reducing the impact of the unit startup current on the power grid. The unit is equipped with high/low pressure switch, anti-freezing protection device, flow controller, overload protection device, power phase sequence protection device, and operation control equipment. When a failure occurs, the controller will automatically give an alarm in real time.

Wide ranges of water outlet temperature and ambient temperature

Convenient installation

Modular design, flexible installation

- Unit modules of different capacities can be combined freely, and up to 16 units can be connected in parallel, with strong compatibility and scalability. Based on the characteristics of the installation site, the user can select a variety of combination methods to connect 1-16 modules in parallel, with the cooling capacity up to 2,080 kW, which fully meets different needs.
- Air cooled modular chillers in the same system start up in stages, and operate in balance, reducing the impact of the unit startup current on the power grid.

Notes: 130 kW module is taken as an example

A maximum of 16 units can be connected in parallel, with capacity up to 2080 kW in a single system.

Features

◆ Compact structure, reducing floor area

The unit has a compact size and occupies a small area, truly saving space and effectively reducing transportation costs.

Note: A 130 kW modular chiller is used for comparison.

◆ Convenient to disassemble and easy to install

All surrounding panels of the unit can be disassembled, facilitating daily maintenance.

◆ Smart control system, user-friendly

A single wired controller can control up to 16 modular chillers in a centralized manner, manage the start and stop sequence of the units, and enable users to learn unit operating status and fault status in time.

●Smart building control, enhancing management reliability
Modbus is a widely used open protocol, especially in the building management system (BMS). Midea air cooled modular chillers can connect to the BMS in the Modbus protocol to realize remote control of up to 256 air cooled modules.

Smart control

◆ Micro PC control board, intelligent and real-time adjustment

The micro PC control board features product operation control, safety protection, and many other functions. Among them, the high-speed processing chip can quickly obtain the operating parameters of the host system, and deliver control instructions in time to realize rapid processing, implement smart control of the unit, and ensure the stable operation of the unit.

◆ New touch wired controller, easy to control the system

130 kW

260 kW

Nomenclature

Excellent design

Air-side heat exchanger

The ring-type air return heat exchanger makes the airflow distribution uniform and heat exchange sufficient.

Fan and motor

The large-air-flow and low-noise fan and large-torque and high-efficiency motor achieve high efficiency and low noise.

Electric control box

The electric control box adopts professional components to ensure quality. The electric control box is designed on the front side to make installation fast and maintenance convenient.

Water-side heat exchanger

The new type of spiral baffle plate evaporator increases the efficiency.

Compressor

The compressor is large in capacity, efficient, and durable.

Liquid storage tank

The large-sized low-pressure liquid storage tank is used to ensure that the system operates reliably.

Features

Environment-friendly

Eco-friendly refrigerant R410A is used, with a higher cooling efficiency. R410A does not contain chlorine that destroys the ozone layer, and its Ozone Depletion Potential (ODP) value is 0. R410A also effectively reduces CO₂ emission.

Wide operation range

Midea King series modular chiller integrates an efficient compressor, a new-generation efficient heat exchange system, a high-precision electronic expansion valve, and other professional components. The COP of the full series units reaches the leading level in the industry.
